

High Ceilings made Easy

SCISSOR TRUSSES

The most affordable way to increase the height of your ceilings.

These are factory made and installed like normal trusses, giving the interior a slight cathedral ceiling look and more volume

RAISING HEIGHT OF THE WALLS

Raising the walls to 2700mm or even 3000mm is another way to achieve higher ceilings with minimal extra costs. This can be done in conjunction with the other two methods

SKILLION ROOF

A Skillion roof system is very straight forward, giving you a higher ceiling at one end of the dwelling and coming down towards the other. Construction is easy and fast

PITCHED / RAFTER ROOF

A pitched roof requires carpenters who know what they are doing, and engineers ready to sign off on it. Not a difficult process, but one of the more expensive ways to get higher ceilings
